

IT COMPANY PROTECTS ITS HUNDREDS OF EMPLOYEES AND MULTIPLE SITES DURING RELOCATION

THE CHANGE

- Security personnel were able to easily manage both the old and new locations during the relocation
- The power and versatility of redundant, 24/7 data centers provided total control
- Access was controlled for over 250 employees, sublease tenants, vendors, clients and cleaning crew
- 3H set up their system to provide specific access to doors and areas at specific times to different groups
- The team was able to use the Brivo system productively right out of the box
- The team has been pleased with the system's excellent performance, flexibility and integration potential

THE CHALLENGE

3H Technology (3H) was growing and purchased a new building in Virginia. They needed an access control system that would work across both locations until the move was complete.

- The lock and key system at the old location wasn't secure and didn't allow for tracking access
- It required a guard to physically lock the doors after hours to prevent unauthorized visitors
- With two buildings to manage and relocation activities, there was an increased security risk

THE CHOICE

“The system is very easy to learn. I know there is a help function, but even with just the initial training, I've probably needed the help function only two or three times.”

- Dan Aide | Facilities Manager | 3H Technology
